

Amendments to the Specification

Please replace the paragraph beginning on page 1, line 22 with the following:

In one embodiment, the base includes at least one integral reinforcing rib. In another embodiment, the base includes an aperture therein for receiving a portion of the power unit. In another embodiment, the at least one leg includes a support that engages the surface and that defines a footprint of the frame, and wherein the handle has an upper end that defines a width such that the width of the upper end is less than the footprint. In another embodiment, the handle also includes an integral accessory holder. In another embodiment, the handle includes a pair of downwardly extending support members that form an acute included angle with the base in the XY-plane. In another embodiment, the handle includes a pair of downwardly extending support members that form an acute included angle with the base in the YZ-plane. In another embodiment, the frame is stackable.
